

Prepared for Brad & Tony

americanstandardbathing.com · Direct-to-Consumer + Trade

Issued Jun 28, 2026

A solid week with two unusually quiet days in the middle. Orders ran well Sun–Wed (**16 orders**, peaking at 7 on Tue), then came in at **zero on Thu & Fri** before resuming normally Saturday. We investigated those two days end-to-end and **found no site fault** — checkout, payments, theme and apps all tested healthy, nothing was deployed, and checkout was confirmed reachable (Friday had live abandoned carts, including a **\$2,542 tub**). Read: a **soft two-day patch on a young, low-volume store**, not a technical break. Net sales were **\$4,588 across 19 orders** (AOV \$241), below last week's breakout but with **traffic healthy all week (3,314 users, +11%)**. Search kept compounding: **impressions +73% to 155.7K**, clicks +109%, average position up to ~12. Two platform notes: ABG's **Avalara AvaTax automation** with Shopify is live (multi-state sales tax now automated end-to-end — a big project done), and we're kicking off the **EDI order flow to the ERP** — a first cutover window is proposed on p.2.

AVG. POSITION

up ~5 spots from 16.7

ORDERS PER DAY — THE TWO QUIET DAYS

16 orders Sun–Wed (Tue peak of 7), then **0 on Thu & 0 on Fri**, recovering to 3 on Sat. Traffic those two days was normal (548 & 479 users); we checked the site and found no fault (p.2).

WHERE VISITORS CAME FROM (USERS)

Organic Search is again #1 at 1,568 users — discovery keeps paying off. “Unassigned” is still ~33% of traffic (UTM gap, rec context). **Email just 4 users / 0 sends** — lifecycle is still off (rec #4).

SALES

\$4,588

net merchandise · 19 orders · AOV \$241

Ex-tax merchandise. Gross incl. Avalara tax \$4,931. No refunds or internal-QA orders this week. GA4 logged 16 transactions (consent/ad-block undercount); Shopify is authoritative at 19.

Shopify · net of refunds & internal QA · ex-tax

Fixture-led again. Six fixture units — an Ovation Curve door, an Elevate neo-angle base + Subway surround, and three apron tubs (incl. a **\$767 Studio tub, the top order**) — drove ~55% of revenue. By day: Sun 1 · Mon 2 · Tue 7 · Wed 6 · **Thu 0 · Fri 0** · Sat 3.

Studio 60x32 Apron Tub \$767

Elevate Base + Surround \$614

Ovation Curve Door \$449

Ovation Apron Tub + Drain \$339 x2

Deep Soak Max Drain x5

↑ The tub+drain attach is now built into the SKU. Two orders (#1064, #1073) shipped as “Apron Bathtub with Deep Soak Drain” — Tony's attach play, now productized.

✓ INVESTIGATED — NO FAULT FOUND

After order #1075 (Wed 11:17 PM), the store recorded **no orders Thu 6/25 or Fri 6/26**, then resumed normally Saturday. We checked it end-to-end: **checkout, payments, theme and third-party apps all tested healthy**, nothing was deployed those days, the site loaded clean on desktop and mobile, and **checkout was confirmed reachable** — Friday had live abandoned carts, including a **\$2,542 freestanding tub**. Traffic and product views were normal throughout. Conclusion: **not a technical outage** — a quiet two-day patch on a young, low-volume store (it runs ~3–4 orders/day, so two zero-days stands out but isn't a site failure).

ADD-TO-CART PER DAY — FUNNEL KEPT WORKING

Cart-adds dipped to 6 on Thu but were back to a normal 24 on Fri and 23 Sat — and Friday saw real checkouts started and abandoned carts. So the funnel was functioning end-to-end; shoppers simply didn't complete those two days.

WHAT WE CHECKED

✓ **Checkout & payments** — tested healthy server-side; live checkouts reached Fri.

✓ **Theme & apps** — no deploys those days; Fast Bundle dormant; desktop + mobile clean.

✓ **Traffic & demand** — normal volume and product views throughout.

Conclusion: no technical fault; orders resumed on their own.

Optional safety net: a simple "0 orders during business hours" alert would flag a quiet stretch fast, if we want one (rec #4).

EDI ORDER-FLOW (SHOPIFY → ERP) — FIRST CUTOVER WINDOW

your call

✓ **Platform milestone (done):** ABG's Avalara AvaTax automation with Shopify went live Jun 16 — multi-state sales tax is now calculated & collected automatically end-to-end (a major integration off the list). Next up — the EDI order flow you've been watching for:

✂ A FIRST 90-MINUTE WINDOW TO BEGIN THE EDI ORDER-FLOW CUTOVER (SHOPIFY → ERP / P21)

Build and testing happen on staging; the **~90-minute window** covers the first cutover and a live test. We'll aim to land it in one pass and follow up with a short window if anything needs a second look — the store is only in maintenance for the cutover itself. We picked the quietest slice that's still a normal, post-workday hour for the team (and the P21 contact) to be on a call.

Traffic eases through the evening after the midday peak. **7:00–8:30 PM ET** is a calm early-evening slot — about **25–30 visitors** on a typical day vs ~110 at the midday peak, with near-zero orders that late.

What customers see: a branded "back shortly" page for ~90 min (or we keep the storefront browsable and pause only checkout). **Need from you:** confirm the window + that the ERP-side (P21) contact is on-call. I'll schedule the build so the slot is cutover-only.

Tue Jul 1
7:00–8:30 PM ET

Recommended. Early evening — low traffic, midweek, whole team awake and just post-workday. (= 4:00–5:30 PM PT.) 90 min for the first cutover + a live test-order check.

RECOMMEND

Wed Jul 2
7:00–8:30 PM ET

Backup. Same early-evening profile if Tuesday slips.

BACKUP

Alt: 9:30–11:00 PM ET

Quietest option (~15 visitors) if you'd rather push it later and shave traffic further — same nights.

QUIETEST

FULFILLMENT & SLA (ORDER → SHIPPED)

Orders this week	19
Shipped / invoiced	14 of 19
In fulfillment queue (recent orders)	5
Typical SLA (order → ship)	~1–2 days

SLA held ~1–2 days — UPS for tubs & drains, R+L freight for bulky bases. The queue is the most-recent (Fri–Sat) orders, normal pipeline. This is exactly the manual step the ERP integration removes.

WHAT'S SELLING — UNITS (♦ = FIXTURE)

Deep Soak® Drains (all)	7
Shower-door rollers & parts	7
Apron Tubs (Ovation/Studio) ♦	3
Elevate Base + Surround ♦	2
Ovation Curve Door ♦	1
Alcove Overflow & Drain	1
Toe Tapper Drain	1

Deep Soak drains led units again (7). The shift holds: 6 fixture units (♦) drove ~55% of revenue — three apron tubs, an Elevate base + surround, and an Ovation door.

SEARCH IMPRESSIONS — DAILY (DISCOVERY STILL ACCELERATING)

155.7K impressions for the week (+73% WoW), peaking at 27.4K on Wed. 1,629 clicks (+109%), average position improved to ~12.0 (from 16.7). (GSC lags 2–3 days, so 6/25–6/27 are provisional and will revise up.)

TOP SEARCH QUERIES

QUERY	CLICKS	POS.	CTR
american standard bathing	37	1.0	92.5%
american standard princeton tub	10	4.4	3.9%
american standard bathtubs	8	2.8	2.1%
american standard studio tub	8	3.0	11.3%
american standard tubs	8	3.5	2.3%
shower surround	7	9.2	0.7%

Brand term “american standard bathing” holds #1 (93% CTR). Non-brand product terms are climbing — “princeton tub” (#4.4), “studio tub” (#3.0), “bathtubs” (#2.8), and “shower surround” (986 impr, #9.2) — that’s where the next volume comes from.

BIGGEST RANKING OPPORTUNITIES (IMPR / AVG POS)

COLLECTION	IMPR.	POS.
Shower Doors	38,672	#16.3
Bathtubs	34,298	#12.5
Bathtubs · Alcove	17,189	#7.5
Shower Walls	14,292	#14.5
Shower Bases	6,545	#14.0

High demand, low rank = upside. Shower Doors (38.7K impr, pos 16) and Bathtubs (34.3K, pos 12.5) draw the most impressions but sit on page 2 — climbing them is the SEO priority (rec #3).

SITE HEALTH & ENGAGEMENT

GSC · GA4

INDEXING & TECHNICAL STATUS

- ✓ Indexed & crawled daily
- ✓ Product schema scoped
- ✓ Checkout tested healthy

Core pages verdict **PASS** — top collections crawled within 1–2 days, product schema correctly scoped. Following the two zero-order days, checkout and payments were tested and confirmed healthy (live checkouts reached Fri); an optional “0 orders in business hours” alert (rec #4) would simply flag a quiet stretch faster.

ENGAGEMENT QUALITY

Avg. session duration	5m 39s
Engagement rate	81.6%*
Pages / session	5.6
Desktop / Mobile / Tablet	63% / 35% / 1%
Top entry page	/collections/bathtubs-alcove

Sessions run ~5m39s — about 2x the retail norm. *Engagement rate is understated: a GA4 tagging artifact on 6/27 (one day reading 4% vs. the week’s ~88%) drags the average; underlying engagement held ~87%.

Accessibility: the AccessiBe ADA widget remains live (front-end user controls). The deeper site-scanning / auto-remediation module is still not enabled — flagged by Tony for a decision.

27

sales-web requests in the pipeline

17

live on the site

22

built by the agent (81%)

5

built — in review / to publish

3

new this week, all auto-built

WHAT THE AGENT SHIPPED & BUILT THIS WEEK

- ✓ 3 new requests submitted this week — all auto-built same week, now in review
- ✓ Pro Resources grouped category filters (PR #185)
- ✓ Professionals “48 states” copy fix (PR #186)
- ✓ Dynamic metafield-driven spec / Tech-Data-Sheet builder (PRs #187/#188)
- ✓ Blog sidebar → ASB support copy (PR #183 — merged live)
- ✓ Blog index image cards (PR #184)
- ✓ Investigated the Thu-Fri zero-order days — site checked out clean
- ✓ Verified pipeline status against merged PRs + published Shopify pages

The agent cleared its queue — every request submitted this week was built the same week, and most of the backlog is already live (verified against merged PRs + published Shopify pages, not just the tracker). Theme merges this week were light (1) only because what's left is a short review/publish queue, not development.

SALES-TO-WEB PIPELINE — VERIFIED STATUS (GITHUB + SHOPIFY)

- Live on the site** 17 LIVE
Americast spotlight, Summit Homes showcase, Request-a-Quote page, Professionals + Find-a-Rep hub, For-Trade filter set, home-page & collection-schema fixes, Pro-page edits, Pro-Resources filters
- Built — in review or ready to publish** 5
WinSupply Jacksonville flyer (built, ready to publish), WinSupply NE report card, Pro-Resources categories, “48 states” copy, Tech-Data-Sheet builder
- Awaiting a data / MCP step** 2 DATA
Move SKUs Bathtub→Whirlpool; “Discontinued” catalog cleanup
- Blocked — needs requester info** 1 BLOCKED
“Customer Experience” event landing page (Tom Schlegel)
- Archived / retired** 2 ARCHIVED
KBIS 2026 event page; sample rep profiles

Most of the pipeline is already live — 17 of 27 requests, with 22 of 27 built by the agent. Only 5 remain: 1 page built and ready to publish + 4 in review (3 submitted just this week). Genuinely needing a human on the build side: the 1 Blocked event page (needs requester info) and 2 data/MCP catalog moves. A nightly Claude Code agent reads each request from Smartsheet, builds on staging, posts a preview link, and waits for approval before going live.

RECOMMENDATIONS — NEXT 30 DAYS

- Press the category climb — biggest organic lever**
Shower Doors (38.7K impr, pos 16) and Bathtubs (34.3K impr, pos 12.5) pull the most search demand but sit on page 2. A+/Enhanced content + on-page SEO to reach page 1 is the single highest-return move, and search is already compounding (+73% impressions).
- Cut over the EDI order flow (Shopify → ERP) — windows on p.2**
Turn on the EDI order flow between Shopify and the ERP (P21) Tony's been waiting on — automating order, inventory and fulfillment sync so orders flow without manual handling, and giving us a system-of-record for attach-rate & fulfillment SLA. Build/test on staging; we'll start with the first 90-min cutover window and follow up as needed.
- Switch on lifecycle — recover abandoned carts**
Email drove just 4 users and 0 sends; 6 Klaviyo flows are still in draft. Activating Abandoned-Checkout is the clearest money on the table — Friday alone had real abandons (incl. a \$2,542 tub), and the 152 cart adds → 30 checkouts gap repeats every week.
- Optional: a light watch on daily order cadence**
Not an outage — but two zero-order days is worth a low-effort tripwire. A simple “0 orders during business hours” alert would surface a quiet stretch in hours rather than at week's end. No downside; only worth it if it's cheap to stand up.

WEEKLY PERFORMANCE BRIEF — DELIVERED EVERY SUNDAY

This brief covers the prior Sunday–Saturday week — sales · traffic · search · funnel & fulfillment · agent executions. Two actions this week: (1) review/publish the 5 remaining sales pages (p.4), (2) pick the EDI order-flow cutover window (p.2). Next edition: Sun Jul 5 (covering Jun 28–Jul 4).
